**DETAILED ACTION**

***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-20, and 55 drawn to a pump apparatus.

Group II, claims 21-22, drawn to an analyzer.

Group III, claims 23-36, drawn to a method for pumping a sample fluid.

Group IV, claim 37, drawn to a computer program for carrying out the method of pumping of group III.

Group V, claim 38, drawn to an electronic carrier means on which is stored on the computer program of group IV.

Group VI, claims 39-42, drawn to a method of preventing contamination of a first pump.

Group VII, claim 43 a diluting system for diluting a sample fluid for analysis.

Group VIII, claims 44-54, a method of diluting a sample fluid for analysis.

2. According to PCT Rule 13.2, unity of invention exists only when the shared same or corresponding technical feature is a contribution over the prior art. The inventions listed as Groups I-VIII do not relate to a single inventive concept because they lack the same or corresponding special technical feature.

The technical feature linking Groups I-VIII relates to a first pump means arranged to pump a first sample fluid into a buffer region and a second pump means arranged to pump a second fluid into the buffer region, thereby displacing first sample fluid into an analyzer. However, US Patent No 5,624,846 to Hayashibe et al., and US Patent no. 6,324, 924 to Peterson both teach a first pump means arranged to pump a first sample fluid into a buffer region and a second pump means arranged to pump a second fluid into the buffer region, thereby displacing first sample fluid into an analyzer. For example, attention is drawn to column 3, line 15- col. 7, line 45 of Peterson.

Therefore, the technical features linking the invention of Groups I-VIII do not constitute a special technical feature as defined by PCT 13.2, as it does not define a contribution over the prior art.

In addition, Groups IV-V each have technical features that are unrelated to the other groups. For example, Groups IV-V include the feature of a computer, which is not required limitation of Groups I-III and VI-VIII.

Accordingly, Groups I-VIII are not linked by the same or a corresponding special technical feature so as to form a single general inventive concept.

3. A telephone call was made to Murry Smith on February 13, 2008 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to P. Kathryn Wright whose telephone number is (571)272-2374. The examiner can normally be reached on Monday thru Thursday, 9 AM to 6 PM, EST.
